## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/SE00/01320

## I. Basis of the report

## 1. With regard to the elements of the international application:\*

- ☒ the international application as originally filed
- ☐ the description:  
 pages \_\_\_\_\_, as originally filed  
 pages \_\_\_\_\_, filed with the demand  
 pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_
- ☐ the claims:  
 pages \_\_\_\_\_, as originally filed  
 pages \_\_\_\_\_, as amended (together with any statement) under article 19  
 pages \_\_\_\_\_, filed with the demand  
 pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_
- ☐ the drawings:  
 pages \_\_\_\_\_, as originally filed  
 pages \_\_\_\_\_, filed with the demand  
 pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_
- ☐ the sequence listing part of the description:  
 pages \_\_\_\_\_, as originally filed  
 pages \_\_\_\_\_, filed with the demand  
 pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_

## 2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language \_\_\_\_\_ which is:

- ☐ the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).

## 3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. ☐ The amendments have resulted in the cancellation of:

- ☐ the description, pages \_\_\_\_\_
- ☐ the claims, Nos. \_\_\_\_\_
- ☐ the drawings, sheet/fig \_\_\_\_\_

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2 (c)).\*\*

\* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).

\*\* Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.

## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

	Claims	_____	NO
Inventive step (IS)	Claims	<u>1-5</u>	YES
	Claims	_____	NO
Industrial applicability (IA)	Claims	<u>1-5</u>	YES
	Claims	_____	NO

**2. Citations and explanations (Rule 70.7)****Box V. Reasoned statement****Cited documents:**

D1: US 6064681 A (DAVID ALAN ACKERMAN)

The documents in the International Search Report represent background art.

The invention defined in the claims 1-5 is not disclosed by any of these documents.

None of the cited documents gives any indication towards the claimed method and arrangement to control a tuneable laser where the laser has been characterised with respect to one or more laser operation points and where the voltage across different laser sections is held constant when the laser is in operation to maintain a predetermined operation point. No teaching from the documents would lead a person skilled in the art to the invention defined in the claims.

Therefore, the invention defined in the claims 1-5 is novel and is considered to involve an inventive step. It is also considered to be industrially applicable.

(54) Title: **A METHOD AND ARRANGEMENT FOR CONTROLLING A TUNEABLE LASER**

(57) Abstract: A method of controlling a tuneable laser that has been characterised with respect to one or more suitable laser operation points, where each of said operation points is determined by the manner in which the different laser sections (7-10) are controlled in order to operate the laser in a predetermined operation point. The invention is characterised by determining the voltage across the different laser sections (7-10) for different operation points when controlling said laser; and holding the voltage across the different laser sections (7-10) constant when the laser is in operation, such as to maintain a predetermined operation point.

WO 01/03262 A1

**A METHOD AND ARRANGEMENT FOR CONTROLLING A TUNEABLE LASER**

The present invention relates to a method and to an arrangement for controlling a tuneable laser.

5

Tuneable semiconductor lasers include several different sections through which current is injected, these sections typically being three or four in number. The wavelength, power and mode purity of the lasers can be controlled by adjusting the current in the various sections. Mode purity implies that the laser is at an operation point, i.e. at a distance from a combination of the drive currents where so-called mode jumps occur and where lasering is stable and side mode suppression is high.

15

Special requirements are required for different applications with respect to controlling wavelength. In the case of telecommunications applications, it is necessary that the laser is able to retain its wavelength to a very high degree of accuracy over long periods of time, after having set the drive currents and the temperature. A typical accuracy is 0.1 nanometer and a typical time period is 20 years.

20

In order to be able to control the laser, it is necessary to map the behaviour of the laser as a function of the various drive currents. This is necessary prior to using the laser after its manufacture.

25

Various methods of characterising tuneable lasers with respect to optimising their operation points are described in Swedish Patent Specifications 9800143-1 and 9900536-5.

30

However, it is also necessary to determine degradation of a laser in operation in order to be able to compensate for degradation by changing the drive currents. A change in wavelength for a given operation point is one example of degradation.

Conventionally, tuneable lasers are controlled by adjusting the current injected into the various laser sections so as to retain a certain desired operation point.

10

One method of discovering laser degradation is to re-characterise the laser after a given time period and therewith compare earlier combinations with the current combinations last measured so as to determine the extent to which the laser may have degraded. The current control of the various sections of the laser is then adjusted so as to obtain the desired operation point.

15

The present invention relates to a method and to an arrangement with which changes in the laser operation point with respect to transmitted wavelength, power and side mode suppression due to degradation is compensated so as to greatly reduce the influence of this degradation or to eliminate its influence entirely.

20

Accordingly, the present invention relates to a method of controlling a tuneable laser which has been characterised with respect to one or more suitable laser operation points, wherein each of the operation points is determined by the extent to which the various sections of the laser are controlled to result in the laser operating in a predetermined operation point, and is characterised by

25

30

determining the laser control voltage across the different sections for different operation points; and holding the voltage across the various sections of the laser constant during operation of the laser over time and thereby maintain a predetermined operation point.

The invention also relates to an arrangement that has the characteristic features set forth in Claim 4.

The invention will now be described in more detail with reference to exemplifying embodiments thereof and also with reference to the accompanying drawings, in which

- Figure 1 is a partially cut-away perspective view of a DBR laser;

- Figure 2 is a sectional view of a tuneable Grating Coupled Sampled Reflector (GCSR) laser;

- Figure 3 is a sectional view of a Sampled Grating DBR laser;

- Figure 4 shows principle curves in a diagram in which current injected in one tuning section is plotted against the voltage across said section; and

- Figure 5 is a block diagram illustrating schematically an arrangement used in accordance with the invention.

Figure 1 illustrates a DBR laser which includes three sections, namely a Bragg reflector 1, a phase section 2 and a gain section 3. Each section is controlled by injecting current thereinto through respective electrical conductors 4, 5, 6.

Figure 2 is a section view of a tuneable Grating Coupled Sampling Reflector (GCSR) laser. Such a laser has four

sections, namely a Bragg reflector 7, a phase section 8, a coupler 9 and a gain section 10. Each of the sections is controlled by injecting current thereinto.

5 Figure 3 is a section view of a Sampled Grating DBR laser, which also has four sections referenced 11, 12, 13, 14 respectively. The sections 11 and 14 are Bragg reflectors, whereas section 13 is the phase section and section 12 the gain section.

10 The aforesaid three types of lasers are common. However, other types of lasers exist.

15 Although the invention is described below mainly with reference to a GCSR laser according to Figure 2, it will be understood that the invention is not restricted to any particular kind of tuneable semiconductor lasers. For instance, the invention can be applied in a corresponding manner with tuneable lasers other than those shown in the  
20 Figures by way of example.

The wavelength emitted by a tuneable laser is determined by the amount of current that is injected into the different laser sections. Wavelength is determined by the number of  
25 free charge carriers to which the injected current gives rise. Degradation in the relationship between wavelength and current can occur in time and therewith destroy the wavelength accuracy of the laser.

30 This degradation occurs primarily in the relationship between current and refractive index, by virtue of a change in the

ratio between the injected current and the number of charge carriers.

5 The ratio between the number of charge carriers and refractive index, and therewith wavelength, however, can be considered to be constant.

10 Thus, the invention relates to a method of controlling a tuneable laser which has earlier been characterised with respect to one or more suitable laser operation points. The operation points are determined by the current to be injected into the different laser sections, or by the voltage that shall prevail across respective sections, in order for the laser to operate in a predetermined operation point.

15 According to the invention, the voltage across the different laser sections for different laser operation points is determined when characterising the laser. In operation, the voltage across the different laser sections is held constant over time so as to maintain a predetermined operation point.

25 The laser can be characterised in accordance with the aforesaid patent specifications, such as to identify a large number of operation points, and thereafter select a given operation point. However, the invention can also be applied when the laser is controlled digitally or analogously to obtain a given operation point. The invention is therefore not dependent on how a given operation point is obtained.

30 In fact, the relationship between current that passes through a section and the applied voltage across said section is not

linear and, furthermore, is changed with degradation of the laser. This applies to all laser sections.

Figure 4 is a diagram in which the current I through one section has been plotted against the voltage across said section. The curve 11 shows this relationship when characterising the laser prior to its degradation. The point 01 shows a selected operation point. The position of the curve 11 moves to the position of the curve 12 when degradation occurs. Thus, the operation point can be caused to move to the point 02, by holding the voltage constant. The result of holding the voltage constant is thus to increase the current through the section from I1 to I2.

This is preferably effected by causing the voltage unit 13 to supply voltage to each of the laser sections with predetermined constant voltages across respective sections.

This results in automatic correction of the current through respective sections and in a constant quantity of free charge carriers, even when the ratio between injected current and the number of charge carriers changes. This applies to all sections of the laser.

Consequently, the wavelength of the emitted light will be held constant over said time period even should the laser degrade. Although an exact wavelength may not be maintained over the full time period, the influence of degradation will at least be greatly reduced.

As distinct to conventional processes, it is not necessary to measure the current nor to correct the current to a certain predetermined value.

5 In actual fact, it is unnecessary to know the extent to which the laser has degraded in order to maintain a given operation point, and therewith wavelength, when practicing the present invention.

10 The present invention thus solves the problem disclosed in the introduction.

Figure 5 is a block diagram of an arrangement used in accordance with the invention.

15

In operation, the voltage unit 13 functions to keep the voltage across the different laser sections 7-10 constant over a time period for maintaining a predetermined operation point. The various voltages required in this respect are  
20 determined when characterising or controlling the laser as relevant voltages across the various laser sections for different operation points.

When characterising the laser, for instance in accordance  
25 with the aforesaid patent specifications, the voltage across the various laser sections can be measured in respect of the different operation points.

The arrangement includes a microprocessor 14 or some  
30 corresponding device for controlling four different voltage generators 16-19 via a D/A converter 15. Each of the voltage generators 16-19 controls one of the laser sections 7-10. The

microprocessor is connected to a storage in which the different operation points are stored in the form of that voltage which shall prevail across respective laser sections.

5 According to one preferred embodiment, the arrangement includes a circuit 20 which is adapted to measure the voltage across respective sections 7-10. The circuit 20 is designed to adjust the voltage unit 13 so that it will maintain a predetermined voltage for each laser section. This is  
10 effected in response to a signal delivered to the microprocessor 14 from the circuit 20 and representing respective measured voltages.

The microprocessor and the D/A converter can be replaced with  
15 a fully analog circuit. In such case, the circuit 20 may also be included in a similar analog circuit.

Although the invention has been described above with reference to an exemplifying embodiment thereof, it will be  
20 understood that the invention can be applied correspondingly to types of tuneable lasers other than a GCSR laser. The voltage generators may also be given any suitable design, as can also the circuit 20.

25 The present invention shall not therefore be considered limited to the aforescribed embodiment, since variations can be made within the scope of the following Claims.

## CLAIMS

1. A method of controlling a tuneable laser that has been characterised with respect to one or more suitable laser operation points, where each of said operation points is determined by the manner in which the different laser sections (7-10) are controlled in order to operate the laser in a predetermined operation point, **characterised** by determining the voltage across the different laser sections (7-10) for different operation points when controlling said laser; and holding the voltage across the different laser sections (7-10) constant when the laser is in operation, such as to maintain a predetermined operation point.
2. A method according to Claim 1, **characterised** by applying predetermined constant voltages across respective laser sections (7-10) with the aid of a voltage supply unit (13).
3. A method according to Claim 1 or 2, **characterised** by measuring the voltage across respective sections (7-10), and adjusting the voltage supply unit (13) so as to maintain said predetermined voltage across each section (7-10).
4. An arrangement for controlling a tuneable laser that has been characterised with respect to suitable laser operation points, where said operation points are determined by the current to be injected into the different laser sections (7-10) in order for the laser to operate in a predetermined operation point, **characterised** by a voltage unit (13) which during operation of the laser functions to hold the voltage across the different laser sections (7-10) constant over time in accordance with the voltage that was measured across the

different laser sections (7-10) in respect of said different operation points measured when characterising the laser, such as to maintain a predetermined operation point.

- 5 5. An arrangement according to Claim 4, characterised by a circuit (20) that functions to measure the voltage across respective sections (7-10), wherein the circuit (20) is adapted to adjust the voltage unit (13) to maintain said predetermined voltage across each section (7-10).

- ☐ the description:  
pages \_\_\_\_\_, as originally filed  
pages \_\_\_\_\_, filed with the demand  
pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_
- ☐ the claims:  
pages \_\_\_\_\_, as originally filed  
pages \_\_\_\_\_, as amended (together with any statement) under article 19  
pages \_\_\_\_\_, filed with the demand  
pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_
- ☐ the drawings:  
pages \_\_\_\_\_, as originally filed  
pages \_\_\_\_\_, filed with the demand  
pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_
- ☐ the sequence listing part of the description:  
pages \_\_\_\_\_, as originally filed  
pages \_\_\_\_\_, filed with the demand  
pages \_\_\_\_\_, filed with the letter of \_\_\_\_\_

2. With regard to the **language**, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language \_\_\_\_\_ which is:

- ☐ the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. ☐ The amendments have resulted in the cancellation of:

- ☐ the description, pages \_\_\_\_\_
- ☐ the claims, Nos. \_\_\_\_\_
- ☐ the drawings, sheet/fig \_\_\_\_\_

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2 (c)).\*\*

\* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).

\*\* Any replacement sheet containing such amendments must be referred to under item I and annexed to this report.

## INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/SE00/01320

**V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement****1. Statement**

Novelty (N)	Claims	<u>1-5</u>	YES
	Claims		NO
Inventive step (IS)	Claims	<u>1-5</u>	YES
	Claims		NO
Industrial applicability (IA)	Claims	<u>1-5</u>	YES
	Claims		NO

**2. Citations and explanations (Rule 70.7)****Box V. Reasoned statement**

Cited documents:

D1: US 6064681 A (DAVID ALAN ACKERMAN)

The documents in the International Search Report represent background art.

The invention defined in the claims 1-5 is not disclosed by any of these documents.

None of the cited documents gives any indication towards the claimed method and arrangement to control a tuneable laser where the laser has been characterised with respect to one or more laser operation points and where the voltage across different laser sections is held constant when the laser is in operation to maintain a predetermined operation point. No teaching from the documents would lead a person skilled in the art to the invention defined in the claims.

Therefore, the invention defined in the claims 1-5 is novel and is considered to involve an inventive step. It is also considered to be industrially applicable.
